Lab 1

Objective: Practice Flow of Controls in C++ and Program Style

In this lab, you will practice flow of control. The following flowchart contains a series of questions to determine what kind of haircut to get.

Based on the flowchart, write a program that asks the questions to the program user and outputs the recommended haircut.

Practice program style by using proper indenting and comments. Please include both single line comments and multi-line comments, put your student number and your name in the comments.

You need to upload 2 files on Moodle before 4pm Wednesday Sep 18, 2024: the source code (.cpp file) and screen shot of your program output.
